

Enhancing source detection for threat localisation

S. Bonomally, S. Ihantola and A. Vacheret

nFacet 3D neutron imager

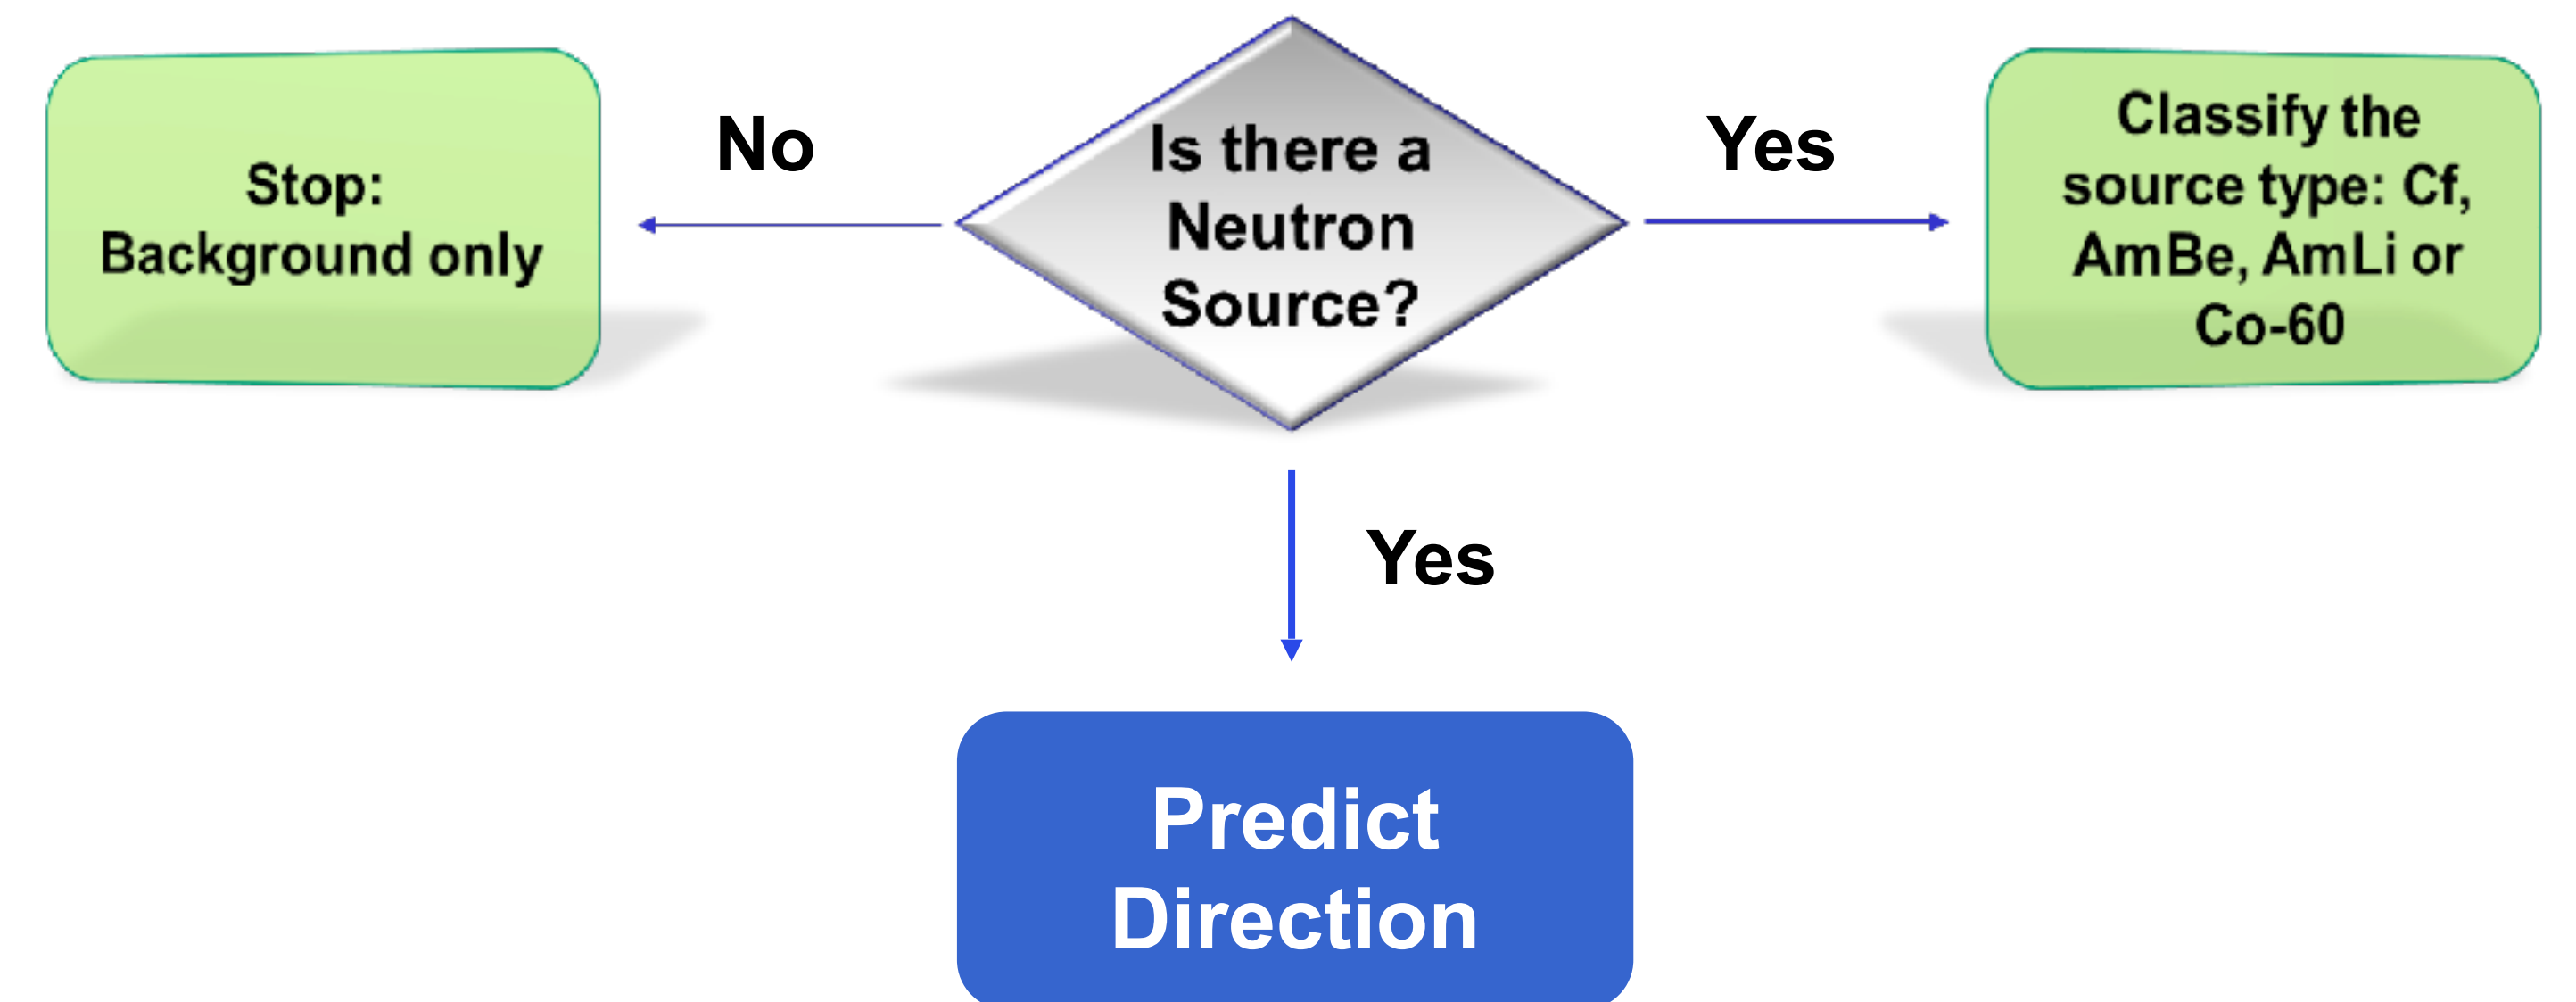

Composite dual scintillator detector elements

5 cm x 5 cm x 5 cm PVT cube segmentation to localise interaction

Layer of LiF:ZnS(Ag) for neutron detection in each detector cell

Threat Management

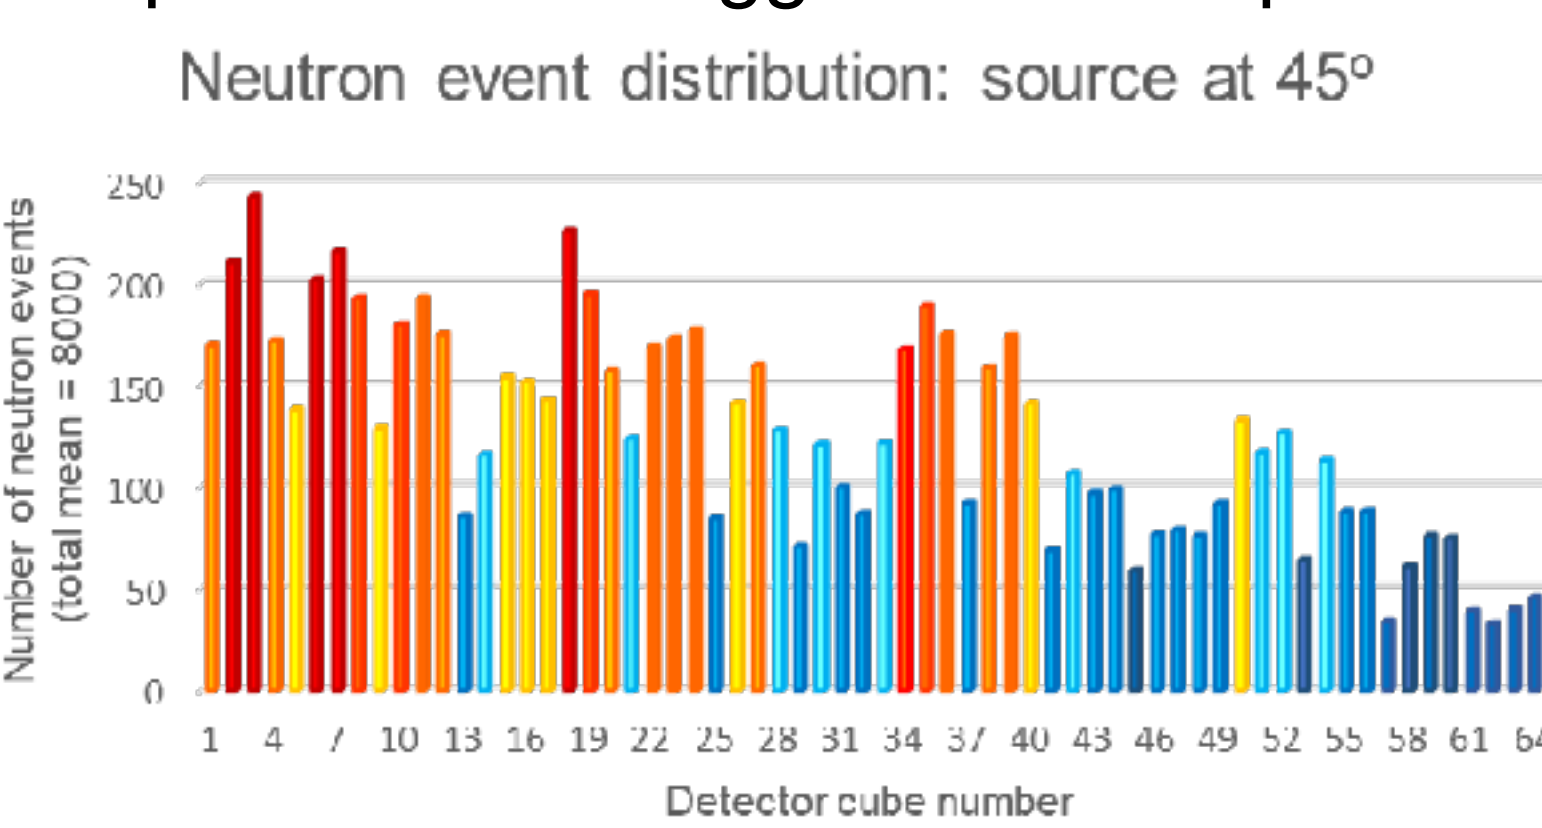

Calibration data

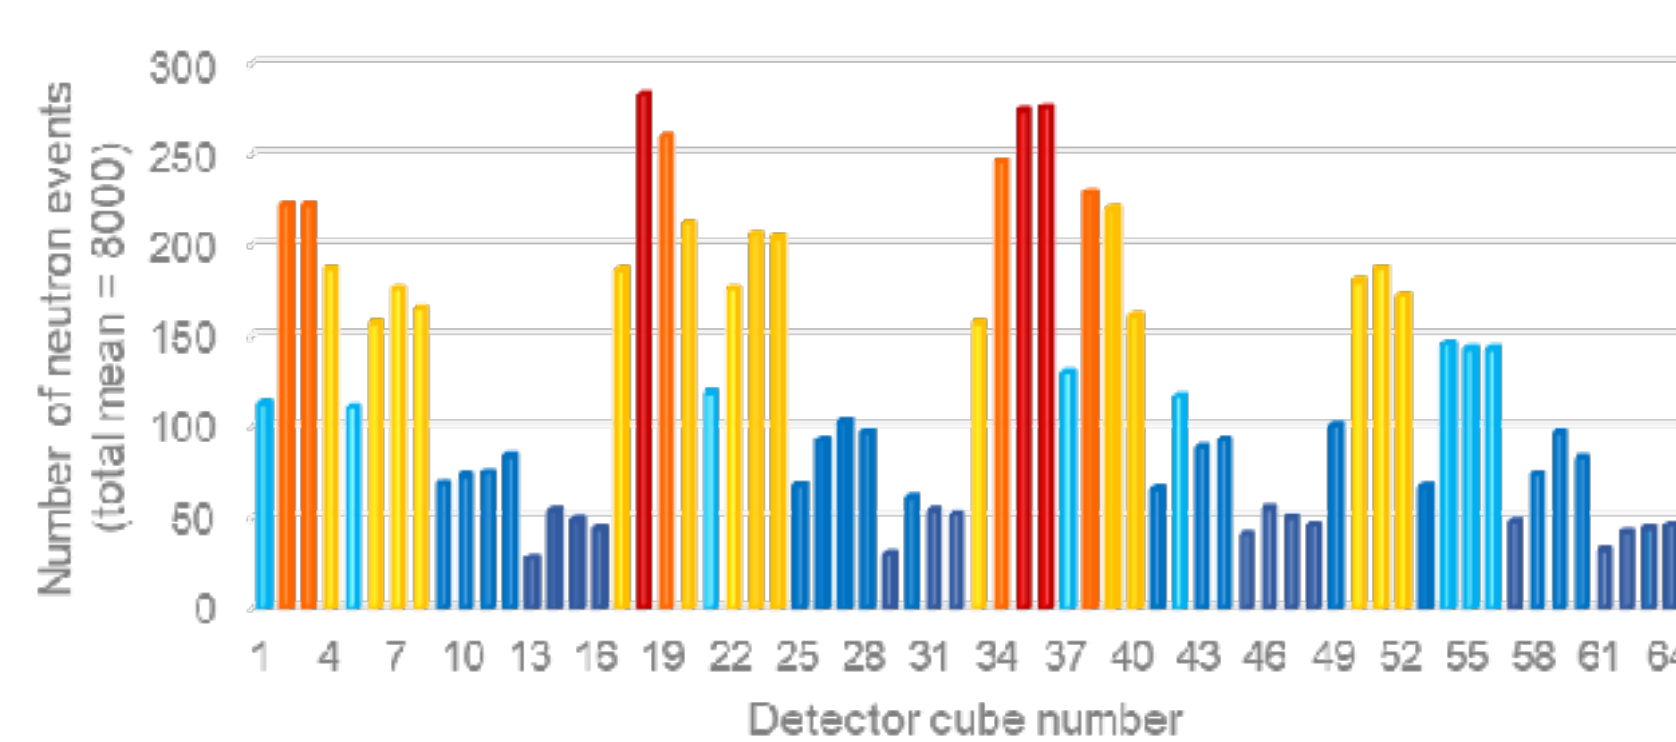

Data sets taken at NPL at fixed angle and positions

Input : neutron trigger value acquired during fixed time duration

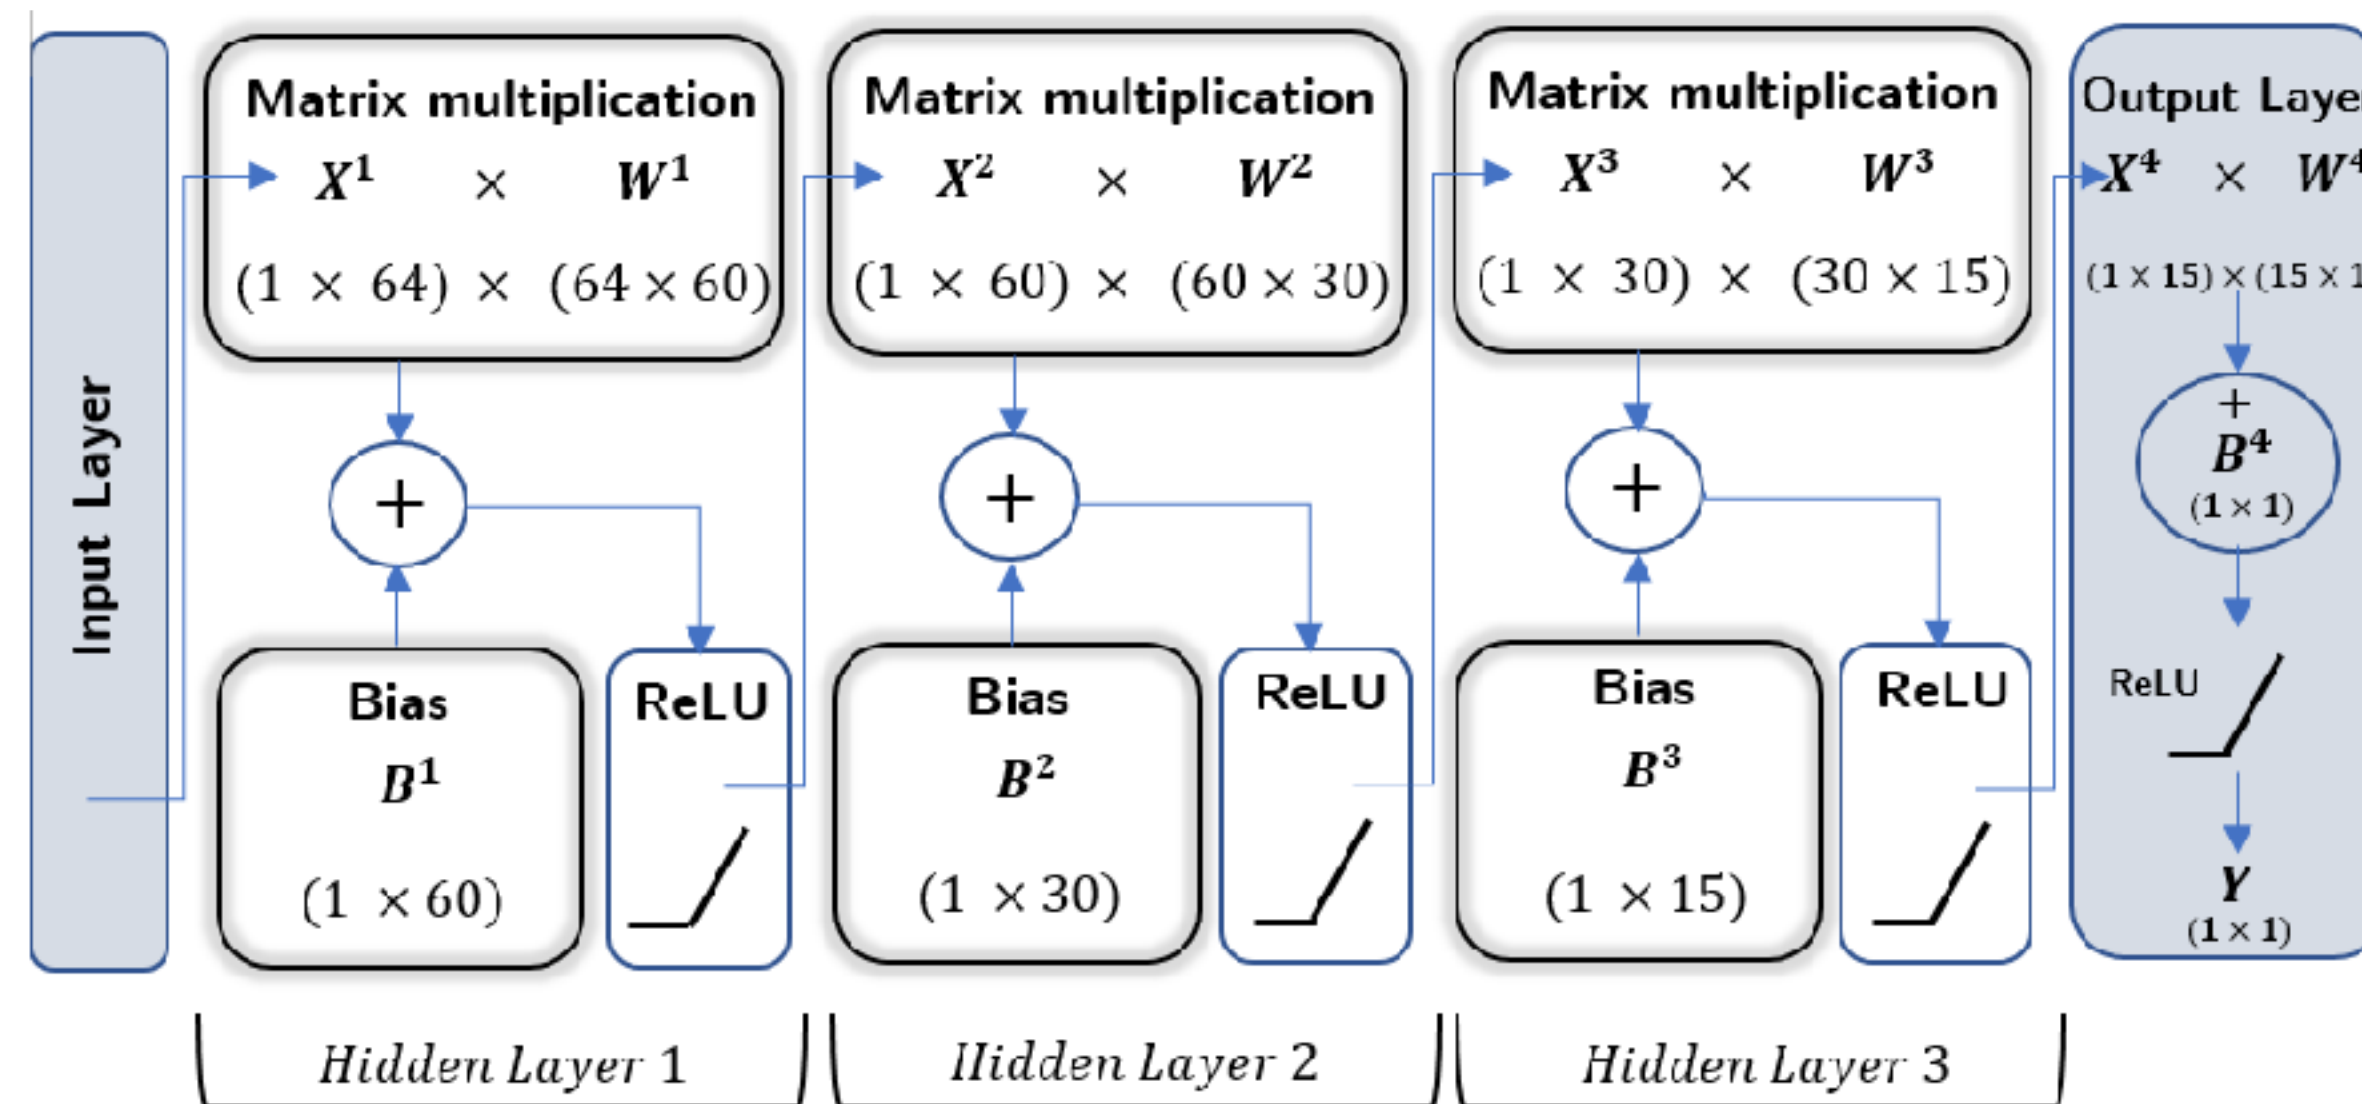

Neutron event distribution: source at 0°

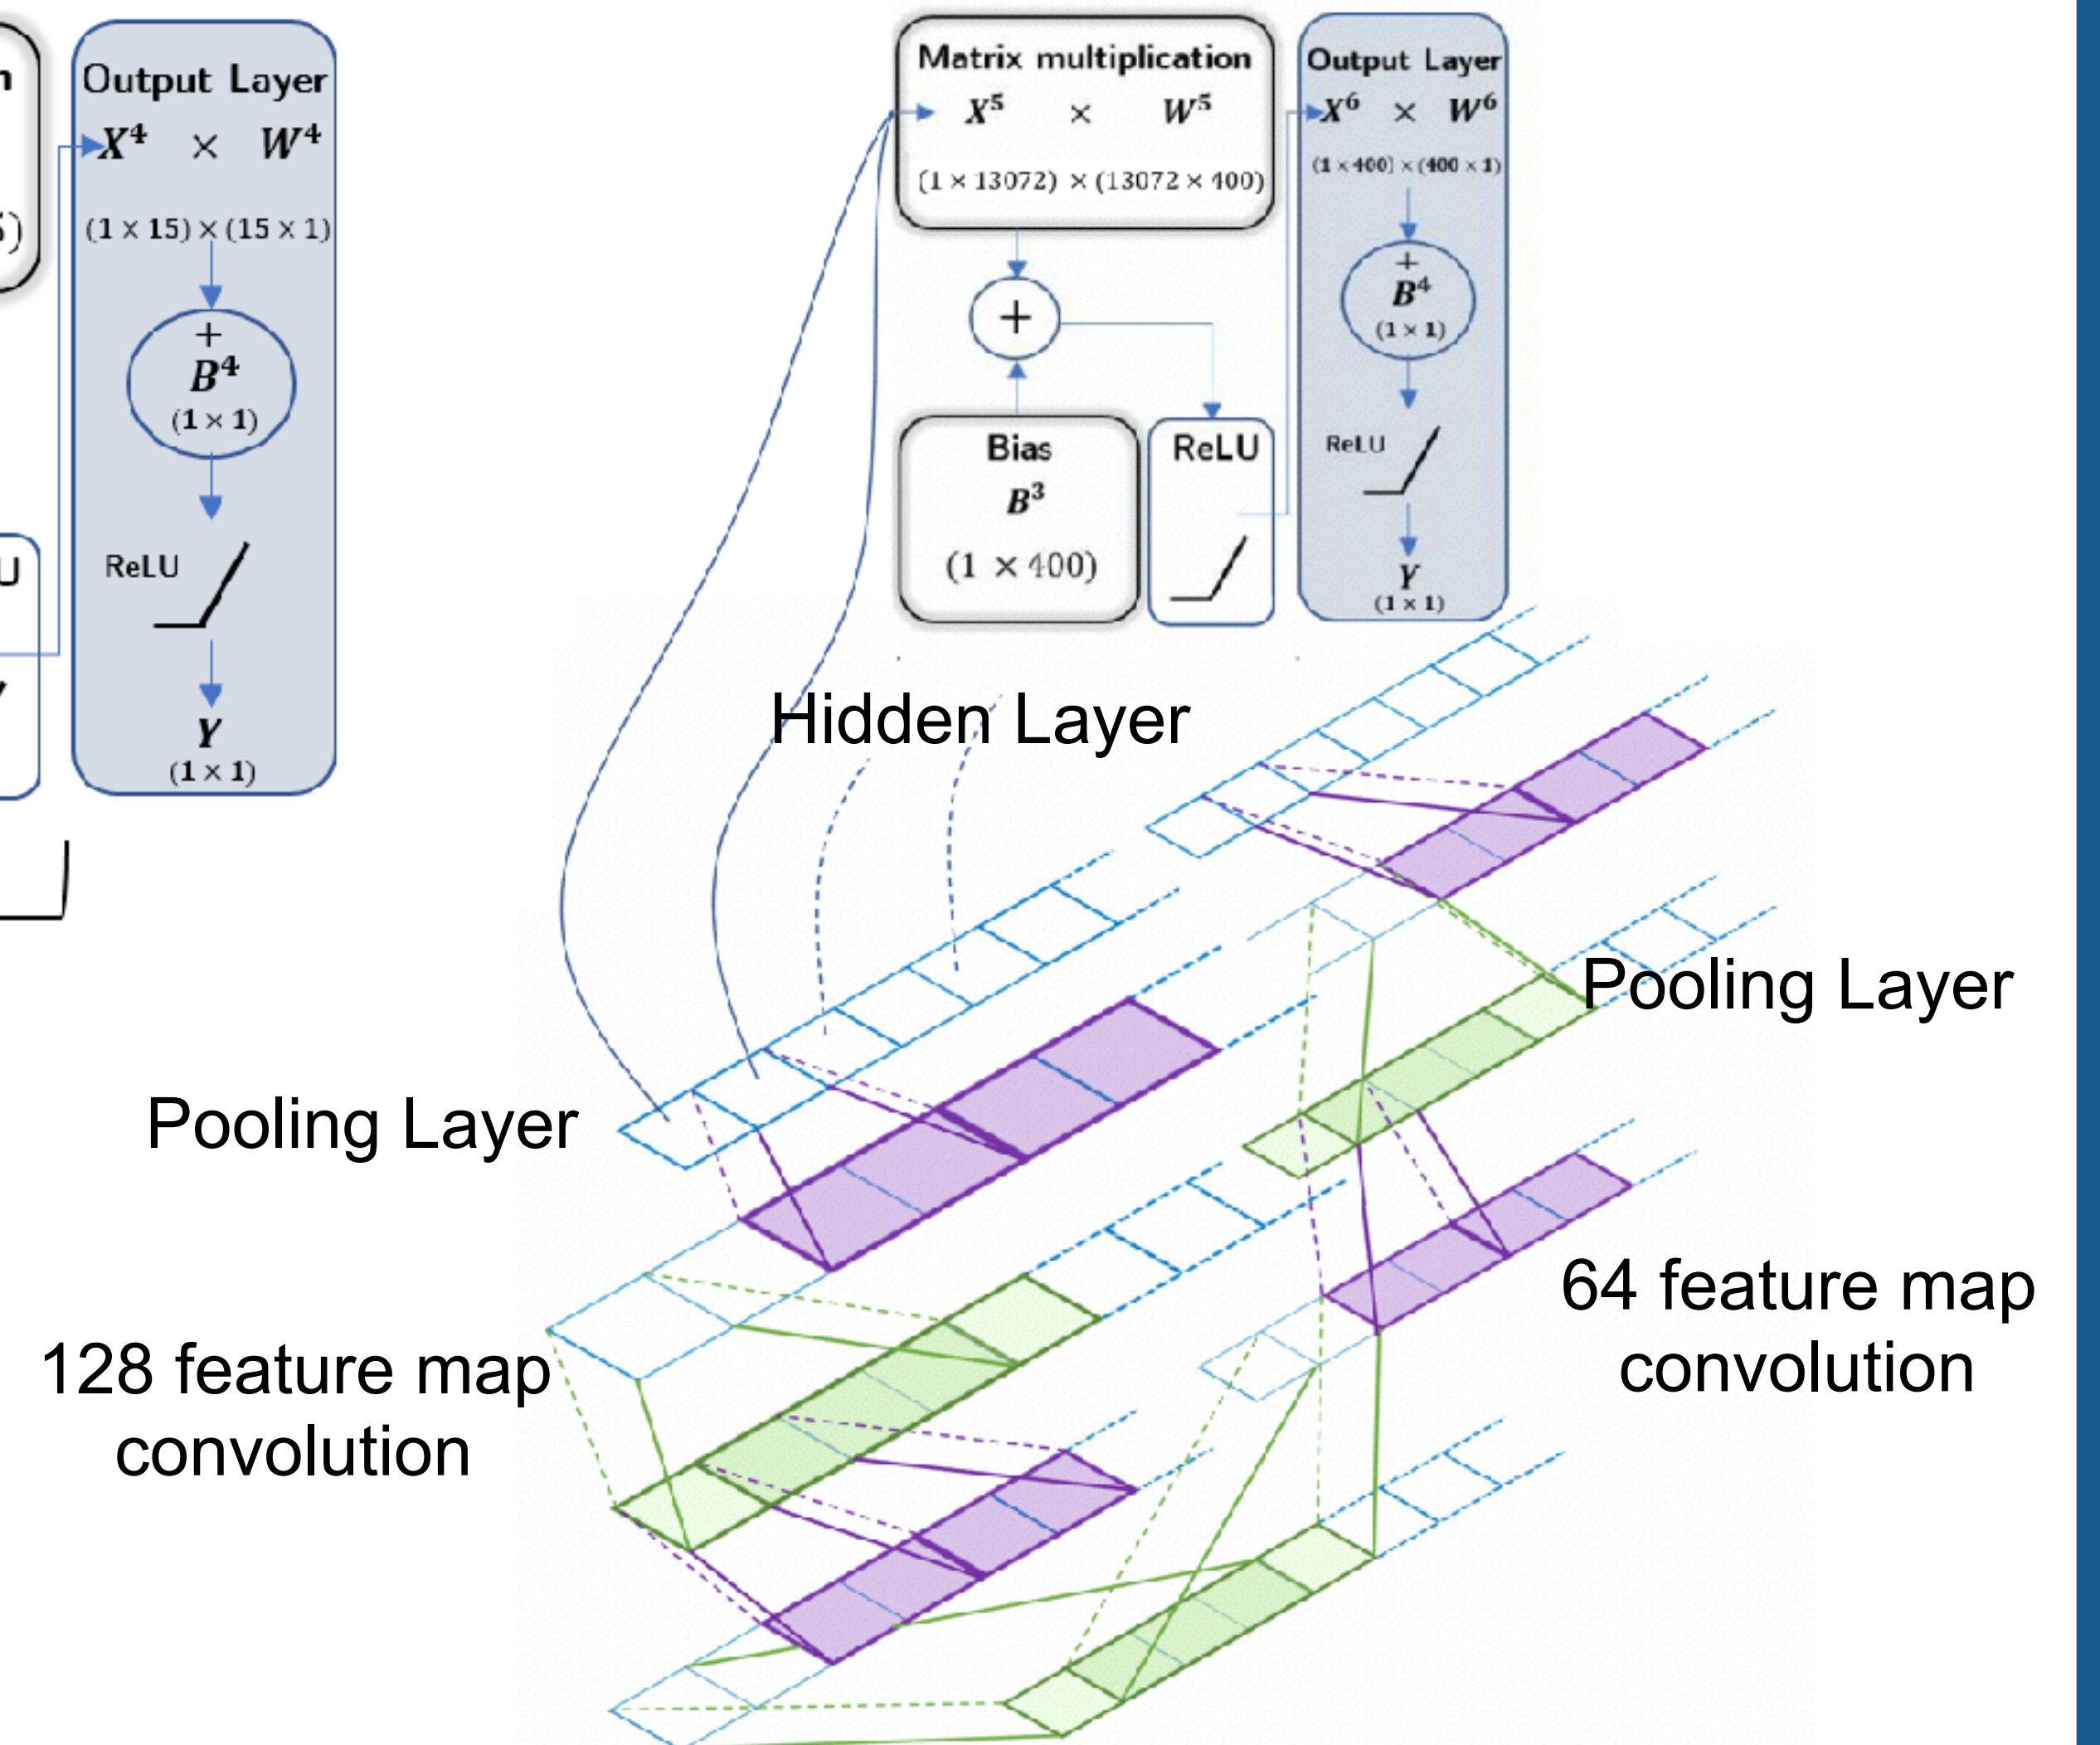

Machine Learning Algorithms

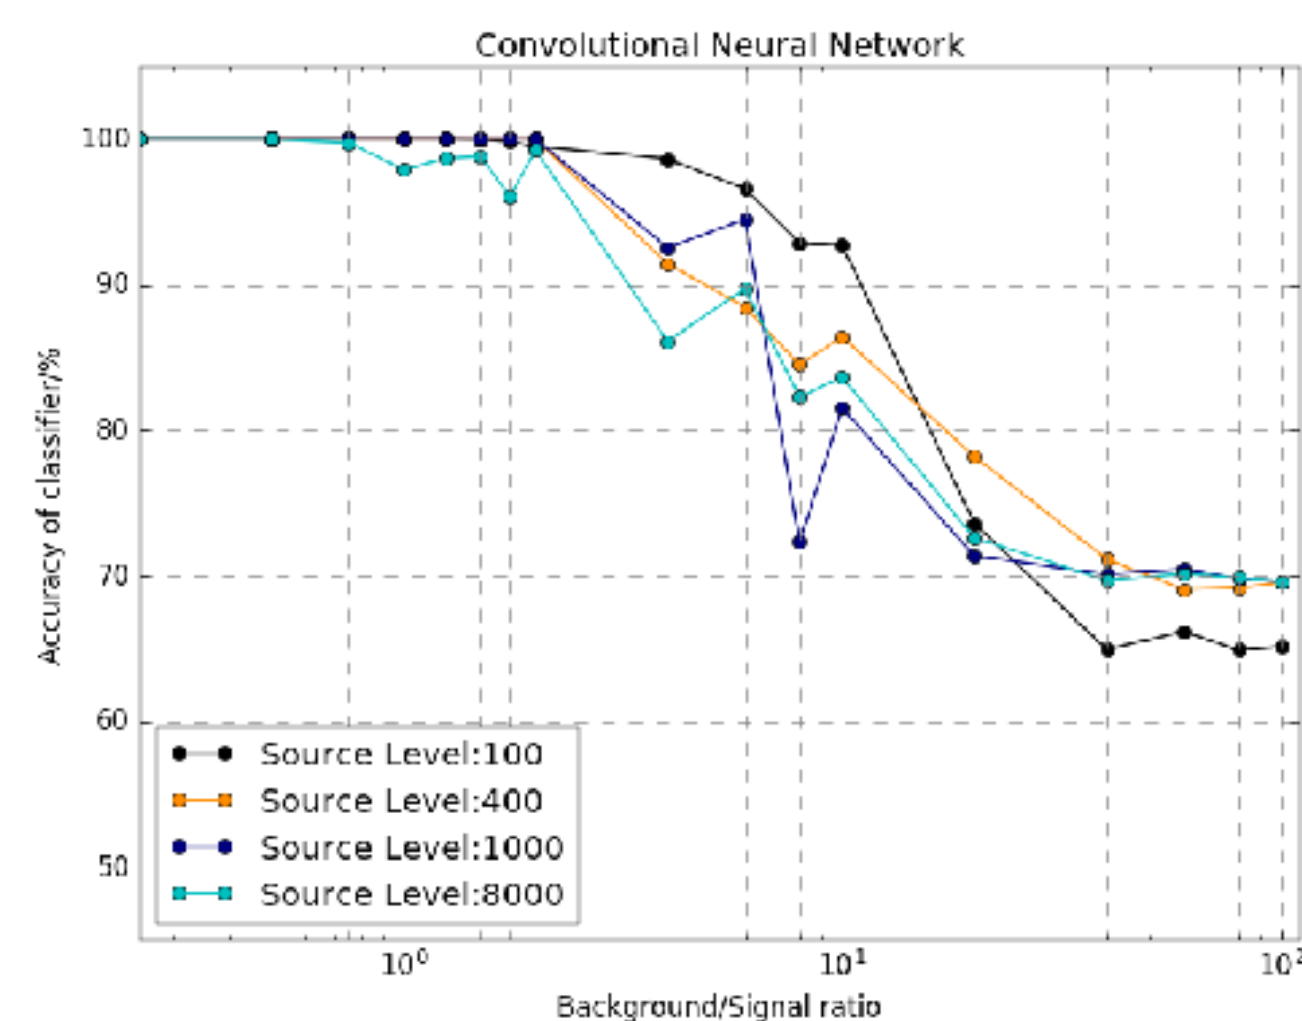

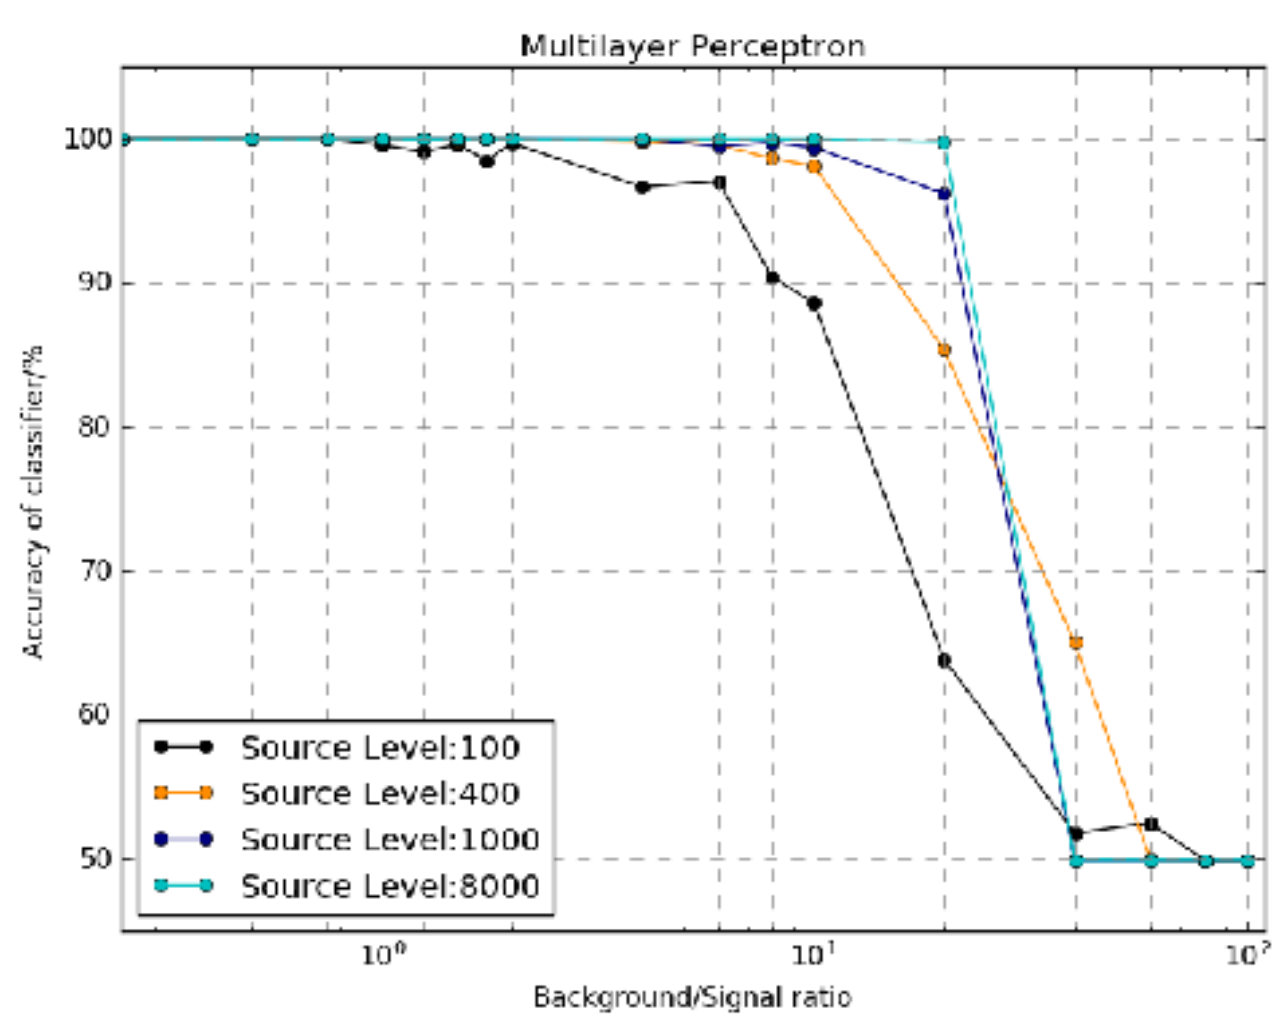

Multilayer Perceptron (MLP)

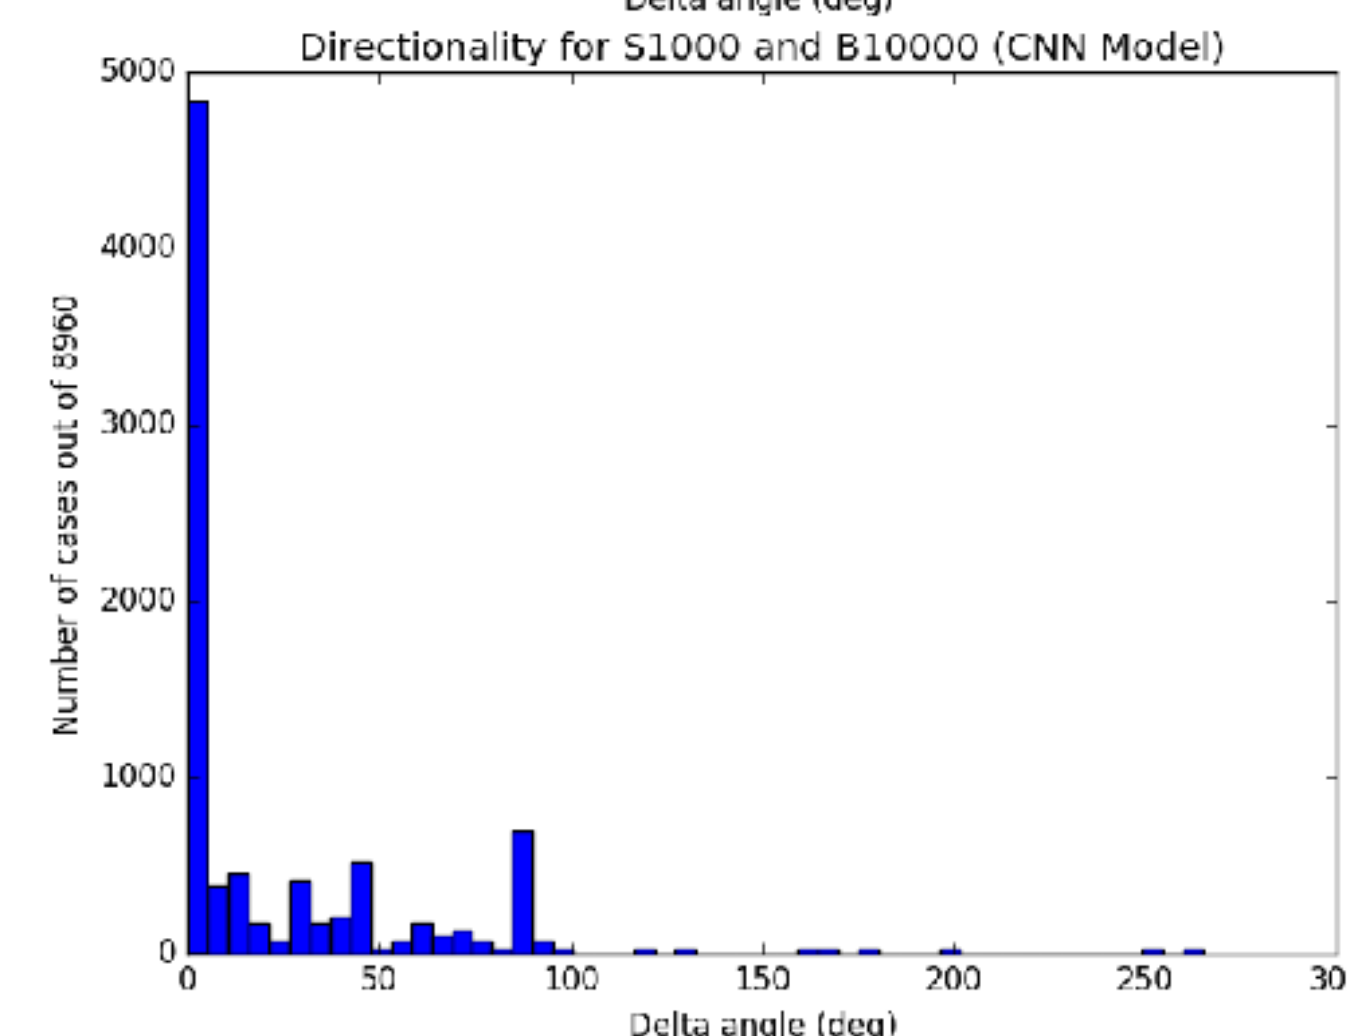

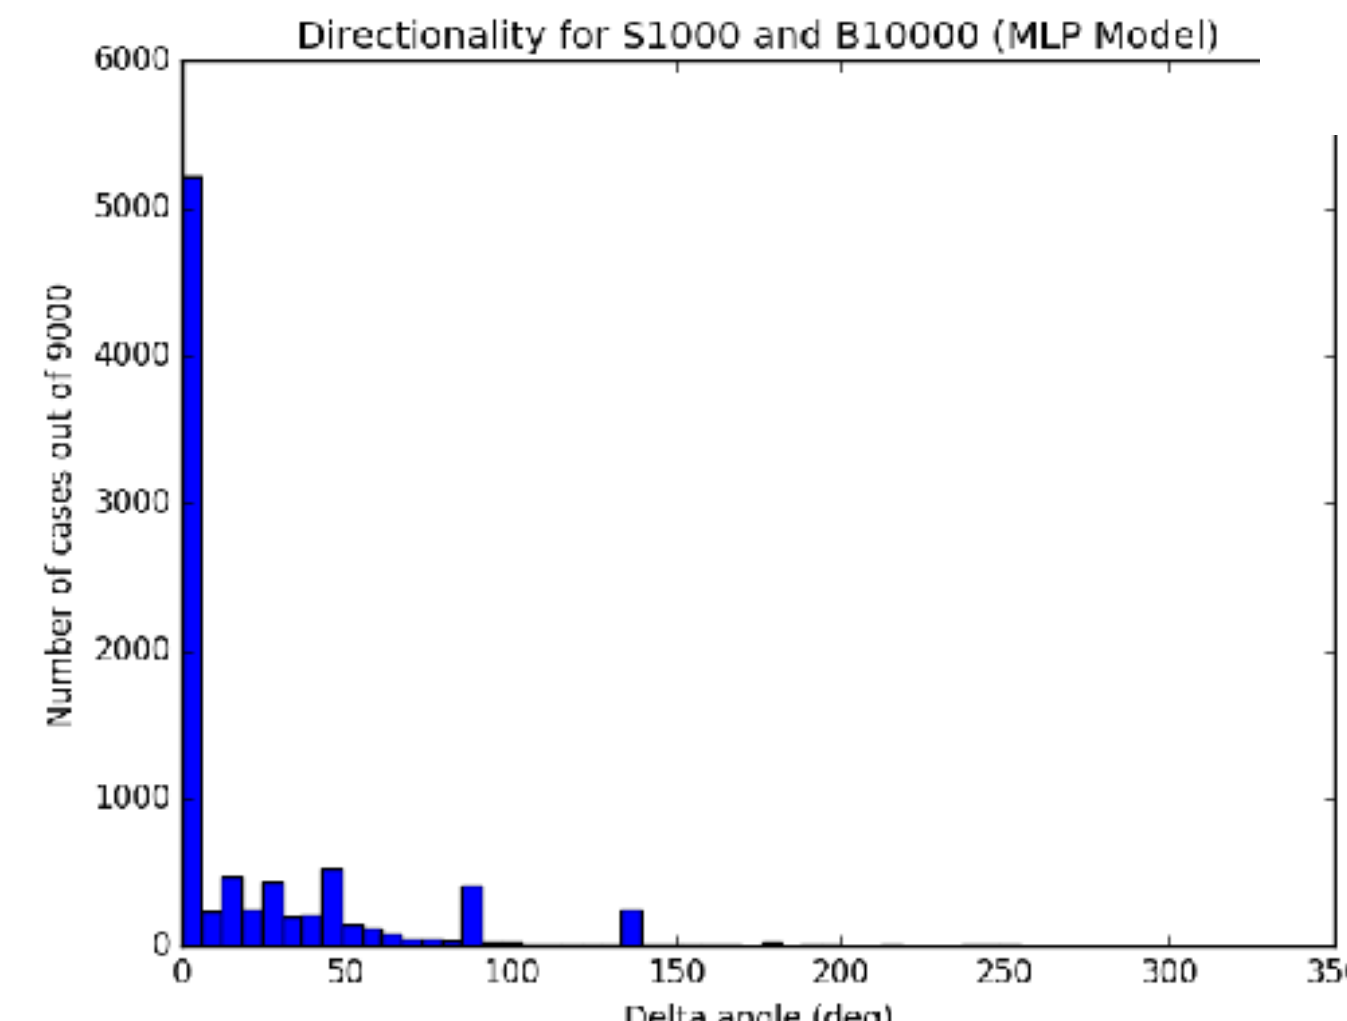

Convolutional neural net (CNN)

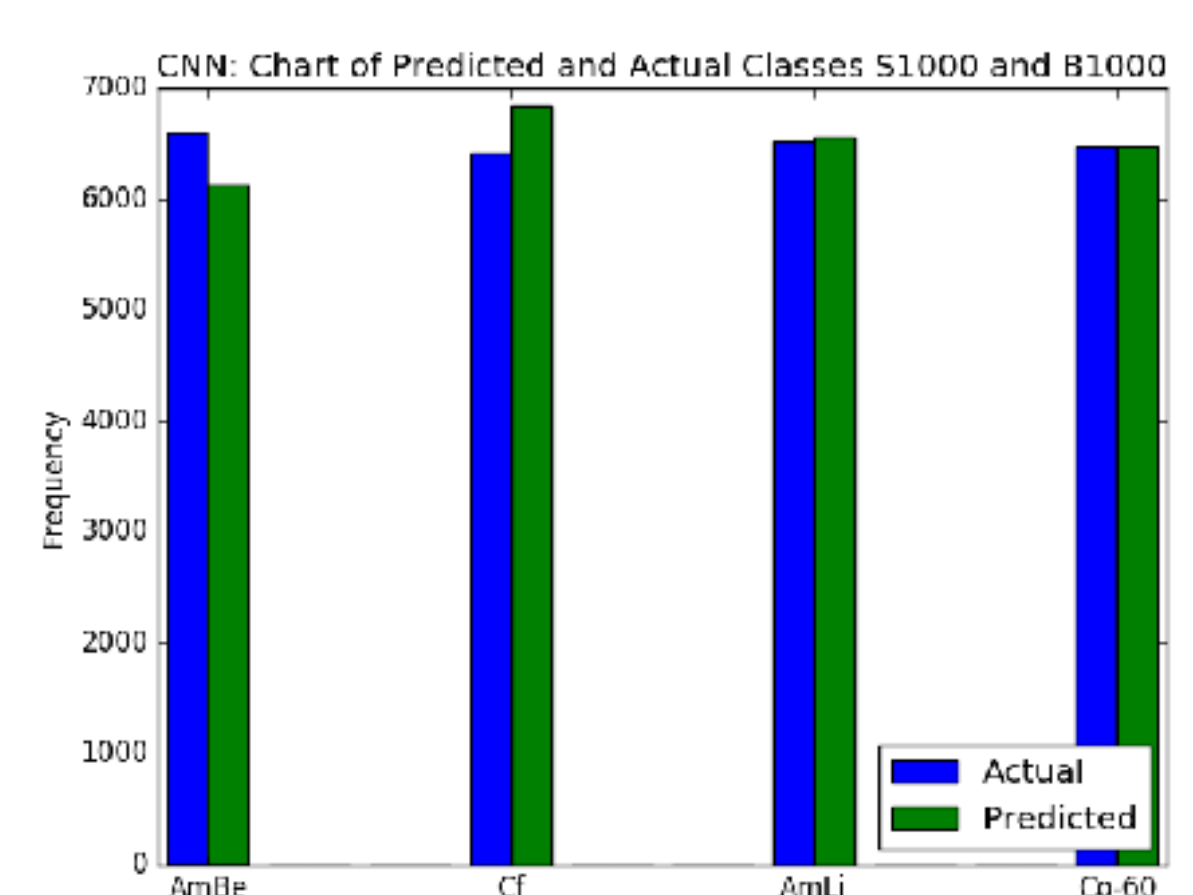

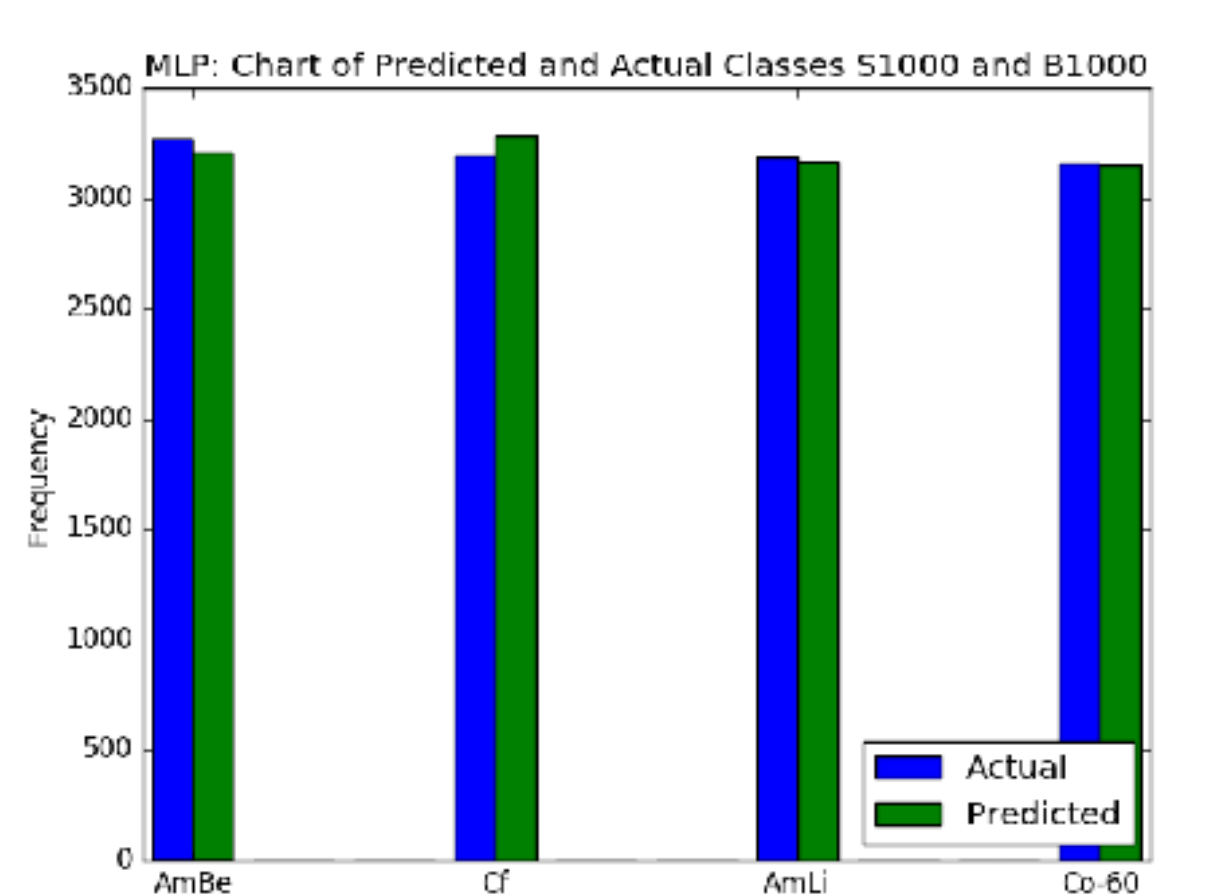

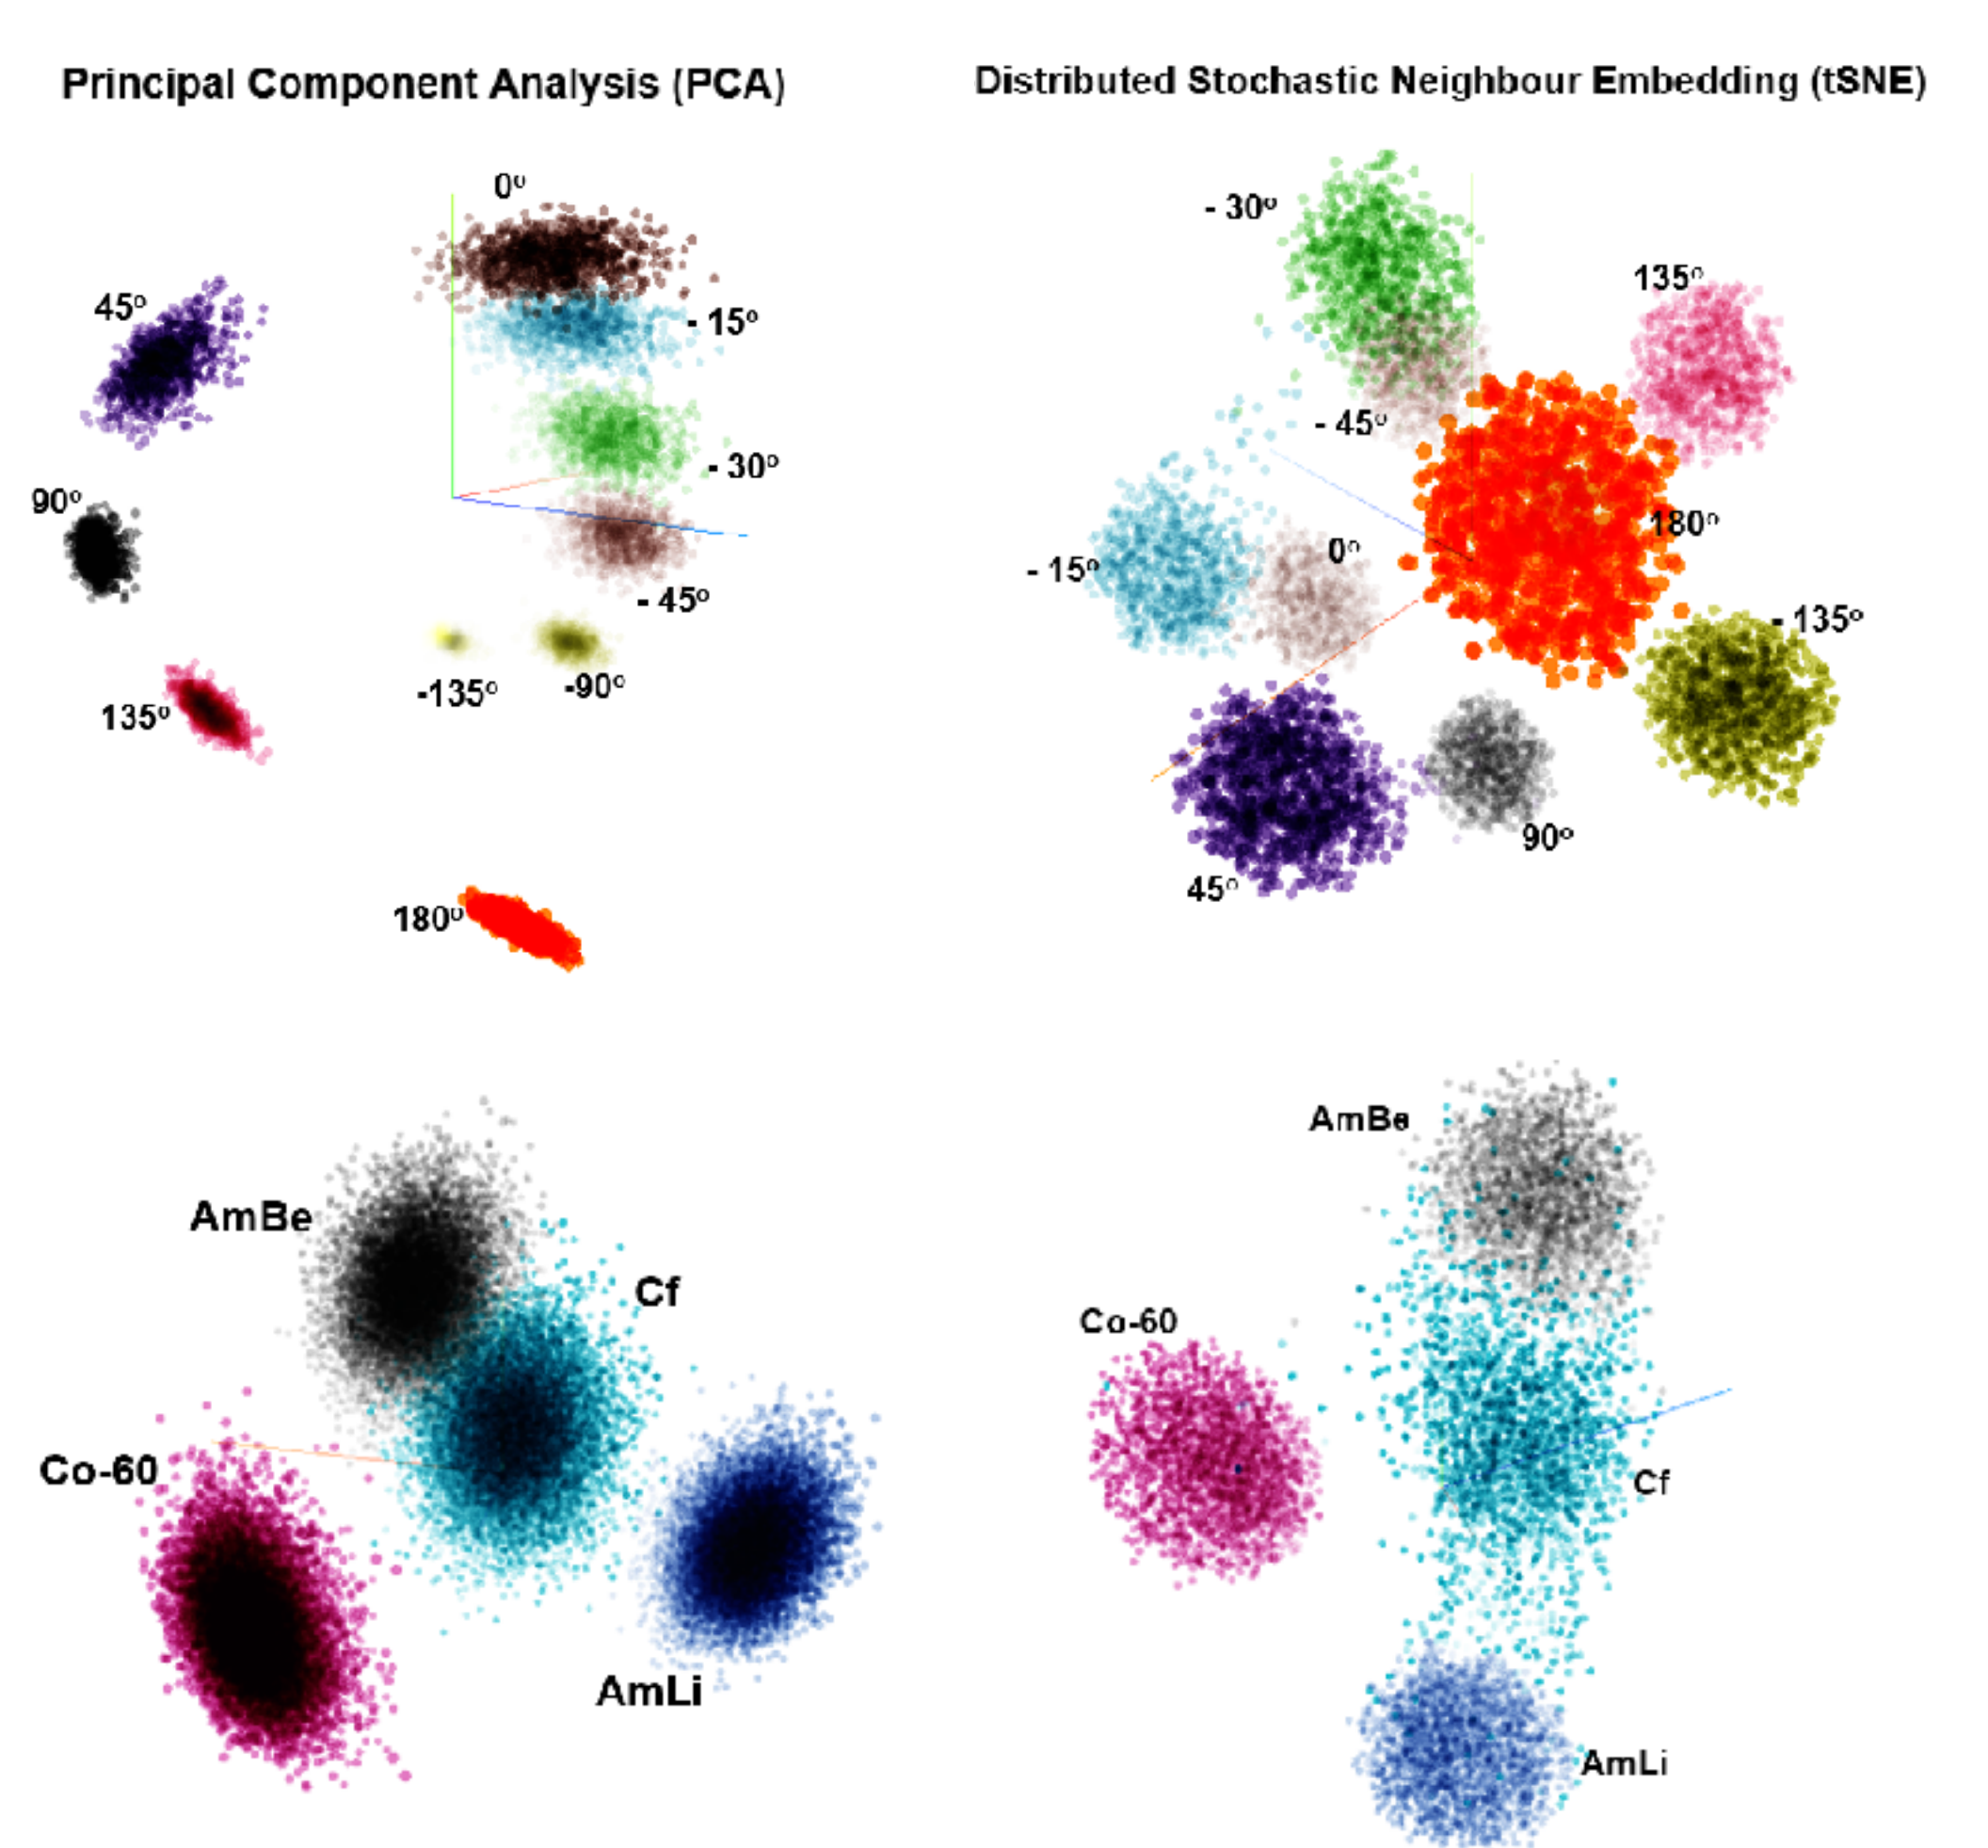

Detection and Classification

Direction estimation

Dataset Visualisation

Ongoing Work

- ✓ PCA and t-SNE visualisation tools to pinpoint the source location in **real-time**.
- ✓ Benchmarking against classical **statistical methods**
- ✓ Development of a **program** to detect, classify and locate neutron sources based on a series of inputs from a given time of exposure
